NEW C-RATING DEFINITIONS FOR INSTALLATION STATUS REPORTING (ISR) PART I – (INFRASTRUCTURE)

MISSION SUPPORT RATINGS:

C-1: Minor facility condition deficiencies and no significant facility configuration deficiencies, with *negligible impact* on the capability to support the tenant organizations' required missions.

C2: Some facility condition deficiencies and/or configuration deficiencies that have *limited impact* on the capability to support the tenant organizations' required mission.

C3: Significant facility condition deficiencies and/or configuration deficiencies that *impair the capability* to support some of the tenant organizations required missions.

C4: Major facility condition deficiencies and/or configuration deficiencies that *present significant obstacles* to the tenant organizations accomplishment of required missions.

READINESS RATINGS:

The readiness rating identifies the extent to which facilities contribute to or detract from the ability of assigned units, organizations and tenants to accomplish their wartime/primary missions.

C1: Facilities fully support the wartime/primary missions of assigned units, organizations and tenants. The condition, configuration and quantity of facilities present no limitations to unit readiness.

C2: Facilities support the majority of the wartime/primary missions of assigned units, organizations and tenants. The condition, configuration and quantity of facilities present only minor limitations to unit readiness.

C3: Facilities present challenges to the wartime/primary missions of assigned units, organizations and tenants. The condition, configuration and quantity of facilities impair mission performance and required assigned units to establish alternative means to support readiness.

C4: Facilities present significant challenges to the wartime/primary missions of assigned units, organizations and tenants. The condition, configuration and quantity of facilities require assigned units to expend considerable additional effort to compensate for shortcomings.
